Patent No. US20020155114A1
GENERAL INFORMATION:
APPLICANT: Marks, James D
APPLICANT: Marks, James D
TITLE OF INVENTION: Therapeutic Monoclonal Antibodies That Neutralize
TITLE OF INVENTION: Therapeutic Monoclonal Antibodies That Neutralize
TITLE OF INVENTION: WOUNDER: WS/09/144,886
FILE REFERENCE: 2500.117USO
CURRENT APPLICATION NUMBER: US/09/144,886
CURRENT APPLICATION NUMBER: US/09/144,886
CURRENT PILING DATE: 1998-08-31
NUMBER OF SEQ ID NOS: 98
SOPTWARE: PatentIn Ver. 2.0
SEQ ID NO 98
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         NUMBER OF SEQ ID NOS: 272

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

GENERAL INFORMATION:

APPLICANT: Adolf, Guenther

APPLICANT: Baum, Anke

APPLICANT: Heider, Karl-Heinz

ITILE OF INVENTION: Compositions and Methods for Treating Cancer using

ITILE OF INVENTION: Cytotoxic CD44 Antibody Immunoconjugates and

ITILE OF INVENTION: Chemotherapeutic Agents

FILE REPERENCE: 1/1383

CURRENT APPLICATION NUMBER: US/11/172,320

CURRENT APPLICATION NUMBER: US/10/645,215

PRIOR APPLICATION NUMBER: US/00/645,215

PRIOR PILING DATE: August 26, 2002

NUMBER OF SEQ ID NOS: 9

Amersdorfer P;

Example 3; SEQ ID NO 126; 110pp; English.

The invention describes an isolated antibody (I) that specifically binds to an epitope specifically bound by an antibody expressed by a specific clone where (I) binds to and neutralises botulinum neurotoxin type A (BoNT/A). An isolated antibody (I) that specifically binds to an epitope specifically bound by an antibody expressed by a clone chosen from clone 25, C35, C35, 1C6, 3D12, B4, 1F3, huC25, A11, A22, WR1(V), WR1(T), 3-1, 3-8, 3-10 and ING1, where (I) binds to and neutralizes botulinum neurotoxin type A (BoNT/A). Also described are: a polypeptide (II) comprising BoNT/A neutralising epitope having an epitope that is

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       CC specifically bound by an antibody expressed by clones as mentioned in (I) CC producing (I), and a composition (III) comprising several anti-
CC bountinum neurotoxin antibodies, where each antibody is specific for a 
CC different epitope of a botulinum neurotoxin and the combination of 
CC antibodies shows greater toxin neutralisation than the single antibodies 
CC in surplus. The following are disclosed: a pharmaceutical composition 
CC comprising (I); and a kit comprising (I). (I) is useful for neutralising 
CC BNNTA antibody and for neutralising a botulinum neurotoxin which 
CC involves contacting neurotoxin with (I) in surplus, where each of (I) is 
CC combination of antibodies shows greater toxin neutralisation than the 
CC combination of antibodies shows greater toxin neutralisation than the 
CC combination of antibodies shows greater toxin neutralisation than the 
CC combination pathologies associated with botulinum neurotoxin 
CC poisoning. (I) exhibits specificity and affinity towards BoNT/A. (I) 
CC enables rapid detection or diagnosis of botulism. This is the amino acid 
CC sequence of mouse heavy chain variable region complementarity determining 
CC region 3 (CDR3) from anti-botulinum neurotoxin antibodies.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 닭
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    S
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              cc a-8, 3-10 and ING1, where (I) binds to and neutralizes botulinum cc neurotoxin type A (BONT/A). Also described are: a polypeptide (II) cc comprising BONT/A neutralising spitope having an epitope that is geticically bound by an antibody expressed by clones as mentioned in (I) producing (I); and a composition (III) comprising several anticodulinum neurotoxin antibodies, where each antibody is specific for a different epitope of a botulinum neurotoxin and the combination of composition (I); and a kit comprising (I); is useful for neutralising comprising (I); and a kit comprising (I). (I) is useful for neutralising comprising (I); and a kit comprising (I). (I) is useful for neutralising shortlinum neurotoxin which (I) in surplus, where each of (I) is comprising (I) antibody and for neutralising a botulinum neurotoxin which (I) is getific for a different epitope of the botulinum neurotoxin and the combination of antibodies shows greater toxin neutralisation than the composition of antibodies shows greater toxin neutralisation than the composition of antibodies shows greater toxin neutralisation than the composition of antibodies shows greater toxin neutralisation than the composition of antibodies shows greater toxin neutralisation than the composition of antibodies associated with botulinum neurotoxin and the confidence of mouse heavy chain variable region complementarity determining squence of mouse heavy chain variable region complementarity determining
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Query Match

The invention relates to a human monoclonal antibody or its antigence adhesion molecule (MadCAM). The invention also relates to a hybridoma cell line that produces the human monoclonal antibody, a pharmaceutical composition comprising an amount of the monoclonal antibody or its composition comprising an amount of the monoclonal antibody or its produces the monoclonal antibody or its produces the monoclonal antibody or its produces the monoclonal antibody or its produces the monoclonal antibody or its produces the monoclonal antibody or its produces the monoclonal antibody or its produces the monoclonal antibody or its produces the monoclonal antibody or its produces the monoclonal antibody or its produces the monoclonal antibody or its produces the monoclonal antibody or its produces the monoclonal antibody or its private the heavy or its private the monoclonal comprising the monoclonal antibody or its private the monoclonal comprising the expression control sequence operably linked to the nucleic acid molecule, where the vector optionally comprises an expression control sequence operably linked to the nucleic acid molecule, where the vector of the nucleic acid molecule, where the vector of the nucleic acid molecule, or its antigen-binding portion that specifically binds of visual states and its antigen-binding portion that specifically binds of indeating an antibody or its antigen-binding portion that specifically binds to MAdCAM, and inhibits binding to emphasion the specifically binds to MAdCAM and inhibits binding to emphasion the specifically binds to MAdCAM and inhibits binding to emphasion the specifically binds to MAdCAM and inhibits binding to emphasion the specifically binds to MAdCAM and inhibits binding to emphasion the specifically binds to MAdCAM and inhibits binding to emphasion and infiltration into tissues, a method of inhibiting alphaseta? MAdCAM mad inhibits binding to the worth of disease, e.g. characterized by circulating soluble human MAdCAM and inhibits binding to the monoclonal methods a

The present invention describes a method for classifying a B-cell as CC malignant or normal comprising: (a) isolating a sequence representing an CC immunoglobulin (Ig) variable region from the B cell; (b) detecting the CC presence of a glycosylation site; and (d) classifying the cell as CC malignant or normal on the basis of the presence or absence of a CC glycosylation site. Also described: (1) treating a patient suffering from CC or at risk of having lymphoma; (2) screening for substances capable of inhibiting glycosylation of the Ig variable region of the B cell receptor CC; and (3) screening for substances (S) dapable of inhibiting the CC interaction between lectins of the type found in the germinal centre and CC meticant found on the surface of Ig of lymphoma cells. (8) has CC cytostatic activity, and can be used in gene therapy, and as a CC glycosylation inhibitor. The method is useful in classifying a B-cell as CC medicament for treating non-Hodgkin's lymphoma. The present sequence CC represents an Ig variable region sequence which is used in the

(I) has virucide and antibacterial activities, and can be used in immunotherapy. The antibodies (I) are useful as anti-toxins or anti-infectives with respect to infective agents, such as anthrax, botulinum, smallpox, Venezuelan equine encephalomyelitis virus (VEEV), or West Nile virus (WNV). The present sequence represents a human heterodimeric antibody heavy chain variable region amino acid sequence, which is used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   New human heterodimeric antibodies or their antibody fragments, useful as anti-toxins or anti-infectives with respect to infective agents, e.g. anthrax, botulinum, smallpox, Venezuelan equine encephalomyelitis or West

(I) has virucide and antibacterial activities, and can be used in immuncherapy. The antibodies (I) are useful as anti-toxins or anti-infectives with respect to infective agents, such as anthrax, botulinum, smallpox, Venezuelan equine encephalomyelitis virus (VEEV), or West Nile virus (WNV). The presents sequence represents a human heterodimeric antibody heavy chain variable region amino acid sequence, which is used in the exemplification
comprises administering an antibody or antibody fragment that binds to a molecule involved in anthrax infection and which has the ability to block the binding of the molecule to at least one of a cell receptor, PA63, PA63 heptamer, PA83, edema factor and lethal factor. A claimed method for determining exposure to B. anthracis comprises assaying a sample for the presence of a molecule selected from cell receptors, PA63, PA63 heptamer,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          New human heterodimeric antibodies or their antibody fragments, useful as anti-toxins or anti-infectives with respect to infective agents, e.g. anthrax, botulinum, smallpox, Venezuelan equine encephalomyelitis or West
                                                                                                                                                                                                                                                                                                   Treating an animal with anthrax infection by administering the protective antigen of Bacillus anthracis, and blocking cell receptors, edema factor or lethal factor.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Sequence 134 AA;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Claim 6; SEQ ID NO 15; 67pp; English.

cc pa83, edema factor or lethal factor with an antibody that has binding cc affinity for the molecule, where the presence of elevated levels of the antibody correlates with the presence of a disease associated with B. cc anthracis. Alternatively, the method involves assaying for the presence of factor or lethal factor with a secondary antibody having binding affinity cf for the antibody, where the presence of elevated levels of the secondary critical variable region selected from a group binding affinity can light chain waitable region selected from a group of sequences ADV868127, a light chain kappa region selected from a group of sequences ADV868127, a light chain kappa region selected from a group or sequences compositions of the present inventional region selected from a group of sequences ADV868135 and a light chain lambda region selected from a group or sequences compositions of the present invention are also useful for producing antitoxing or anti-infectives to infective agents such as anthrax, botulinum, smallpox, Venezuelan equine encephalomyelitis and West Nile virus. The present sequence is that of the heavy chain variable region of a human compositions and bone marrow samples of domors who had been vaccinated sequence analysis was performed on positive resounders. Neutralization of anthrax toxin activity by purified Pabs was demonstrated.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Sequence 134 AA;

```

```
CC polypeptide, antibody, scFv, antibody fragment or bioconjugate, that CC modulates neuropilin-1 (NP-1) function for inhibits NP-1 dependent CC angiogenesis of endothelial cells and/or invasion of tumour cells, CC whereby the NPB binds to NP-1 and modulates NP-1 function. Further CC disclosed is an ex vivo method of determining the dependency of the CC invasiveness of a naturally occurring invasive cancer cell on the CC invasiveness of NP-1 mediated invasion and/or adhesion and an inhibitor of CC metastasis of NP-1 mediated invasion and/or adhesion and an inhibitor of CC is useful for detecting NP-1 expression, modulation of NP-1 function, CC adhesion of cells, preferably tumour cells. The NPB of the invention of antifacture of medicament for the treatment or prevention of NP-dependent and non-physiological blood vessel growth, particularly correlated with a tumour. It is also useful for treatment or prevention of cells, The current sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                            Claim 3; SEQ ID NO 29; 120pp; English
                                      represents a single chain antibody neuropilin binder (NPB) polypeptide

MACAM, a method of inhibiting madcham-mediated leukocyte composition of inhibiting alphabeta? MACAM-dependent cellular adhesion, composition and into tissues, a method of inhibiting madcham-mediated leukocyte to composition in a subject. The antibody, composition and methods are inflammatory boweld disease, Crohn's disease, primary bilary colitis, liver disease, primary bilary colitis, insulin dependent diabetes and coloral such account of the such antibody of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 밁
                                                                                                                                                                                                                                                                                                                                                                                                                                               S

                                                                                                                                                                                       CC nucleic acid molecule compositing a nuclebtide sequence encoding the heavy chain or its antigen-binding portion or the light chain or its antigen-compositing a nuclebtide sequence encoding the heavy composition of an antibody described above, a vector comprising the nucleic acid molecule, where the vector optionally comprises an composition control sequence operably linked to the nucleic acid molecule, a host cell comprising the vector optionally comprises and composition that specifically binds MACAM, a method of isolating an antibody or its antigen-binding corrien that specifically binds to MACAM, a method of isolating an antibody or its antigen-binding portion that specifically binds to MACAM, a composition portion that specifically binds to MACAM, a composition portion that specifically binds to MACAM, a composition and inhibits binding to expressing human MACAM, a method of inhibiting MACAM-mediated leukocyte composition that specifically binds to MACAM-mediated leukocyte composition that specifically binds to MACAM-mediated leukocyte composition into tissues, a method of inhibiting MACAM-mediated leukocyte composition and inhibits binding to cells composition and methods of inhibiting alphasheta7/MACAM-dependent cellular adhesion, cinflammation in a subject. The antibody, composition and methods are cuseful for disgnosing and treating inflammatory disease, e.g. cinflammatory bowel disease, Crohn's disease, ulcerative colitis, cinflammatory bowel disease, and the sequence represents a human monoclonal confirmation antibody of the invention.

The invention describes an isolated antibody (I) that specifically binds to an epitope specifically bound by an antibody expressed by a specific Clone where (I) binds to and neutralises botulinum neurotoxin type A (BONT/A). An isolated antibody (I) that specifically binds to an epitope Specifically bound by an antibody expressed by a clone chosen from clone CS 25, C35, 1C6, 3D12, B4, 1F3, huC25, Ar1, Ar2, WR1(V), WR1(T), 3-1, CC 3-8, 3-10 and ING1, where (I) binds to and neutralizes botulinum neurotoxin type A (BONT/A). Also described are: a polypeptide (II) CC comprising BONT/A neutralising epitope having an epitope that is specifically bound by an antibody expressed by clones as mentioned in (I); producing (I); and a composition (III) comprising several anticody in specific for a different epitope of a botulinum neurotoxin and the combination of comprising (I); and a kit comprising (I). (I) is useful for neutralising BONT/A antibody and for neutralisation than the single antibodies in surplus. (I) in surplus, where each of (I) is specific for a different epitope of the botulinum neurotoxin which combination of antibodies shows greater toxin neutralisation than the single antibodies in surplus. (I) is useful for diagnosing the botulism composition of involves contacting neurotoxin with (I) in surplus, where each of (I) is specific for a different epitope of the botulinum neurotoxin which composition of antibodies shows greater toxin neutralisation than the single antibodies in surplus. (I) is useful for diagnosing the botulism correction than the combination of antibodies associated with botulinum neurotoxin than the correction of diagnosis of botulism. This is the amino acid sequence of mouse heavy chain variable region complementarity determining region 3 (CDR3) from anti-botulinum neurotoxin antibodies.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         antibacterial; antibody; botulinum neurotoxin type A; BONT/A; BONT/A neutralising epitope; anti-botulinum neurotoxin antibody; toxin neutralisation; botulinum neurotoxin poisoning; mouse;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            New isolated antibody that neutralizes botulinum neurotoxin type A, useful for diagnosing botulism or for treating pathologies associated with botulinum neurotoxin poisoning.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  WPI; 2004-652009/63.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          31-AUG-1998; 98US-00144886.

The present invention relates to novel proteins (I) that bind to pregnancy-associated plasma protein A (PAPP-A ADW04676). (I) comprises a first and second immunoglobulin variable domain sequence which binds to PAPP-A. Also claimed are proteins (II) which comprise light chain (LC) and heavy chain immunoglobulin variable domain sequences which binds to PAPP-A. The proteins are useful for diagnosing, preventing or treating proliferative diseases such as glioblastoma, osteosarcoma and overgrowth of vascular smooth muscle cells following e.g., balloon angioplasty (which may cause restenosis). The proteins are especially useful for useful for treating diseases involving IGF regulated growth. The present sequence is one such immunoglobulin variable domain sequence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   New pregnancy-associated plasma protein. (PAPP-A) binding proteins comprising immunoglobulin variable domain sequences, useful for diagnosing, preventing or treating diseases such as cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                proliferative disorder; restenosis; glioblastoma; osteosarcoma
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Cytostatic; Vasotropic; heavy chain variable domain;

CC and heavy chain antibody genes, useful for treating B cell chronic CC lymphocytic leukemia (B-CLL). B-CLL is a disease of slowly proliferating CC CD5+ B lymphocytes. These cells express low levels of surface membrane Ig CC that serves as the receptor for antigen (BCR). Analysis of V region gene CC cassettes used by B-CLL clones differs from that in normal cells, with an CC increased frequency of VH3-07, VH4-34, and VH1-69 genes. This implies that the structure of the antibody molecule, and antigen specificity. CC play a role in the leukemic transformation of particular B cells. The CC patients with aggressive disease share the same classes of VH, D, JH, VL and JL antibody genes, forming sets of patients have a disorder selected from CH dogkin's disease, non-Hodgkin's lymphoma, Burkitt's lymphoma, myeloma or Systemic lupus erythematosus, myasthenia gravis, Grave's disease, type I CC diabetes mellitus, autoimmune peripheral neuropathy, and autoimmune Systemic lupus erythematosus, myasthenia gravis, Grave's disease, type I CC diabetes mellitus, autoimmune peripheral neuropathy, and autoimmune CC 13/JH5/VIkappa012/2/JIkappa1/kappa2 (Set II); VH3-CC 13/JH5/VIkappa012/2/JIkappa1/kappa2 (Set II); VH3-GC 13/JH6/VIlambda1c/JIlambda1 (Set V); VH1-03/D6-CC 13/JH5/VIkappa012/2/JIkappa1/kappa2 (Set VI); VH1-03/D6-CC 19/JH4/VIkappa012/2/JIkappa1 (Set VI); VH1-03/D6-CC 19/JH4/VIkappa012/2/JIkappa3 (Set VI); VH1-03/D6-19/JH4 (Set VId); VH5-05/D3-CC 19/JH4/VIkappa012/2/JIkappa3 (Set VII) Treating a patient having B-CLL CWith the above genes comprises administering an agent that binds to the antibody encoded by the antibody genes. The CC agent is an anti-idiotype antibody, a peptide antigen, or an aptamer. The CC apent sequence is an Ig H chain variable region, B-CLL set II peptide.
                                                                            Query Match

(1) comprises a first and second immunoglobulin variable domain sequence which binds to PAPP-A. Also claimed are proteins (II) which comprise light chain (LC) and heavy chain immunoglobulin variable domain sequences which binds to PAPP-A. The proteins are useful for disgnosing, preventing or treating proliferative diseases such as glioblastoma, osteosarcoma and overgrowth of vascular smooth muscle cells following e.g., balloon angioplasty (which may cause restenosis). The proteins are especially useful for useful for treating diseases involving IGP regulated growth. The present sequence is one such immunoglobulin variable domain sequence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  New pregnancy-associated plasma protein-A (PAPP-A) binding proteins comprising immunoglobulin variable domain sequences, useful for diagnosing, preventing or treating diseases such as cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Cytostatic; Vasotropic; proliferative disorder;

                                                                                                                                                                                                                                                  The present invention relates to novel proteins (1) that bind to pregnancy-associated plasma protein A (PAPP-A ADW04676). (1) comprises a first and second immunoglobulin variable domain sequence which binds to PAPP-A. Also claimed are proteins (II) which comprise light chain (LC) and heavy chain immunoglobulin variable domain sequences which binds to PAPP-A. The proteins are useful for diagnosing, preventing or treating proliferative diseases such as glioblastoma, osteosarcoma and overgrowth of vascular smooth muscle cells following e.g., balloon angloplasty (which may cause restenosis). The proteins are especially useful for useful for treating diseases involving IGF regulated growth. The present sequence is one such immunoglobulin variable domain sequence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               New pregnancy-associated plasma protein-A (PAPP-A) binding proteins comprising immunoglobulin variable domain sequences, useful for diagnosing, preventing or treating diseases such as cancer.

 Pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           92
      Pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Score
